Commercial Fertilizers, Commercial Feeds

AND

Agricultural Liming Material

This publication contains a report of all official samples of fertilizer, feed and lime examined by this Department from January 1, 1931, to May 1, 1931. It should be consulted frequently by prospective buyers and used as a guide in purchasing commodities of this nature.

GENERAL INTRODUCTION

This publication contains the results of our official examination of samples of fertilizer, feed and lime taken by State inspectors from January 1, to May 1, 1931. It represents an earnest effort on the part of this organization to render to residents of Maryland early information covering these commodities. It has been our policy in the past to report the products of each industry as a separate bulletin. While this scheme had certain advantages, it very often necessitated the holding of part of the reports for six months to a year in order to complete work on all samples. Under our proposed policy the reports of all fertilizers, feeds and limes examined will be reported under one cover at three months intervals during the year. It is our opinion that this will be a distinct improvement over past methods of disseminating these data and will render to users of these products information at a time when it will be of most value to them, and when the materials they have purchased are still on the market.

Included in this report are the results of chemical and microscopical examinations upon 996 samples of feeds to ascertain if manufacturers' guarantees and declaration of ingredients were sustained.

In addition, there is also given other pertinent information regarding violations for improper tagging, non-registration, etc.

The first part of this publication, or from pages 8 to 32, contains the analysis of 745 samples of fertilizers taken by our inspectors from shipments going forward to Maryland users.

One hundred and two samples of limes were drawn from dealers' stocks and warehouses throughout the State. Results of these examinations are included in this bulletin and have also been reported to the respective manufacturers, dealers and, whenever possible, to the buyers.

In addition to the analysis of the official samples included in this report, 223 samples drawn and forwarded to this department by purchasers have been examined and reports transmitted to parties particularly interested. Since a representative sample is as essential as an accurate analysis in judging the quality of a product, this organization can only vouch for the accuracy of the results obtained on the material submitted.

Fertilizer Control Activities

Fertilizer reports included in this publication covering samples secured by our inspectors during the early part of this

year reveal very few major deficiencies. This is especially true regarding those samples carrying a high percentage of ammonia. Approximately 9 per cent. of the samples secured, however, were not licensed at the time of sale. This failure on the part of members of the industry to register their products before sale is consummated constitutes the most flagrant violation encountered.

The New Fertilizer Law

The 1931 session of the Maryland Legislature enacted a new fertilizer law which becomes effective January 1, 1932. In order to promote national and international uniformity in the fertilizer industry, most states have adopted uniform methods in stating plant food and the order in which it shall appear upon the package; namely, nitrogen, available phosphoric acid and potash. The Maryland Legislature made this change obligatory in our law.

The use of the term nitrogen, rather than ammonia, has been adopted by 27 states throughout the Union, while 14 more permit its use. Only two states now require the use of the term ammonia and prohibit the term nitrogen. Cooperation on the part of fertilizer dealers and users in accepting this change is requested in order that confusion may not develop. Ammonia may be converted to nitrogen by multiplying by the factor .8225.

Section 13 of the law becoming effective January 1, 1931, makes it possible for the Fertilizer Inspection Service to establish rules and regulations in regard to the inspection, analysis and sale of fertilizers, to the end that the provisions of this act may be effectively administered and enforced. Operating under this authorization, the following regulations have been prepared. They are herewith presented to the readers of this bulletin.

REGULATIONS SUPPLEMENTING STATE FERTILIZER LAW IN EFFECT JANUARY 1, 1932

Registrations

Each brand of fertilizer is required to be registered for each calendar year or portion thereof. Applications should be submitted on or before January 1, of each year, or subsequently before sales are made, on forms furnished by this department. These forms shall have outlined thereon the name of the product, name and address of manufacturer and the guaranteed analysis thereof, stating the minimum per cent. of total nitrogen, available phosphoric acid and water soluble potash, together with the sources of phosphoric acid and water soluble potash; provided, however, the ingredients from which the nitrogen is obtained need not be given—but the nitrogen guaranty may be divided into two classes; namely, mineral and organic; and the percentage of nitrogen derived from each of these classes need only be stated; provided, further, that there shall be allowed a variation of one-fourth of 1 per cent. for goods containing 2 per cent. of nitrogen or under, and a variation of one-third of 1 per cent. for goods containing from 2 to 3 per cent. of nitrogen and a variation of one-half of 1 per cent. for goods containing over 3 per cent. of nitrogen.

Forms For Labeling

A. Every bag or package of fertilizer must show plainly on the outside of same, and every parcel or lot sold in bulk (except for manufacturing purposes) must be accompanied by the following information.

Net Weight in Pounds
Brand Name or Trade Mark
Grade (as 2-10-2), Namely 2% Nitrogen,
10% Phosphoric Acid and 2% Potash
Guaranteed Analysis in Percentages
Total Nitrogen
Available Phosphoric Acid (P_2O_5)
Water Soluble Potash (K_2O)
Name and Address of Manufacturer

B. The above represents minimum requirements. Nothing in this regulation shall be construed as prohibiting the presentation of information in addition to that set down therein as obligatory, provided such information accurately describes the product.

C. In the case of unacidulated bone, tankage, fish or other animal or vegetable material used as fertilizer, it shall be lawful to guarantee the phosphoric acid as total phosphoric acid.

D. When the name of the material is used as a part of the brand name of a mixed fertilizer, as, for example, blood, bone or fish, the nitrogen or phosphoric acid shall be derived from or supplied entirely by the material named. When the name of a material is used as a brand or as part of a brand and the nitrogen and phosphoric acid is supplied only in part by the material named, the word "brand" shall follow the name of the material. Example: "Fish Brand Fertilizer."

E. No applications for registration of mixed fertilizers will be accepted except those that are guaranteed to contain minimum percentages of nitrogen, available phosphoric acid, and water soluble potash, stated as **whole numbers** in the above order, and any numerals used on the bag or package or on any tag or label attached thereto to designate the analysis of any mixed fertilizer being sold or offered for sale must be stated in whole numbers.

Preliminary Hearings

Section 11 of the fertilizer law provides that if it appears any of the provisions of the act have been violated, the person or persons apparently responsible for such infractions shall be given an opportunity to offer any statement or evidence which would show cause why the matter should not be referred to the proper prosecuting attorney.

A. Nature of Hearings

In the event such hearings are necessary, they will be held in the office of the State Law Department in Baltimore. Written notice indicating the time and place will be rendered five days in advance. Hearings will be informal; while a personal appearance will not be mandatory, in most cases it is usually advantageous. Representation by attorney will be permissible.

B. Results of Hearings

If after hearings have been held and consideration given to all the facts, it is the opinion of enforcement officials that prosecution is not warranted, no further action will be taken. If in the opinion of enforcement officials prosecution is warranted the necessary legal procedure will then be initiated.

Tolerances

It is the policy of this department to require that guarantees as established by manufacturers shall always be main-

tained and the adoption of a definite tolerance is in effect a lowering of all such guarantees. As a matter of practical procedure, however, it is realized that slight allowances must be made for errors occurring in mixing, sampling and chemical examinations. The question of substantial deficiencies will be decided upon the facts of each case with special reference to evidence of any deliberate attempt to meet the tolerance allowed rather than the guarantee.

A. Refund in Case of Deficiency

While the fertilizer law contains no modification which makes it obligatory upon members of the fertilizer industry to repay consumers for financial losses they have sustained due to fertilizer deficiencies, this department is occasionally requested to compute such losses. In computing such refunds, an overage in one constituent will not be construed as compensating for deficiencies in others. Members of the fertilizer industry frequently claim that a deficiency in one ingredient is compensated in value by an excess of another ingredient. In conformity with guaranty, however, the particular plant food guaranteed and purchased shall be delivered rather than an equal money value of another plant food.

Mixed to Order Sales

Section 14 of the fertilizer law provides in substance that the registration fee shall not apply to any fertilizer mixed according to a formula furnished by a consumer. Sacks must be plainly branded "Mixed to Order" and in all other respects carry same information that is required to be shown on regular mixtures.

For each sale made under the "Mixed to Order" designation manufacturers will be required to hold in their files an order, signed by the consumer, on which is shown the complete formula of the goods. This order must be held until the annual tonnage report, for the year in which sale is made, has been accepted by this department.

Interpretation of "Brand"

For the purposes of this law, each commercial fertilizer or fertilizer material shall be considered as distinct and separate brands, when differing either in guaranteed analysis, name, brand or trade mark, or in any other method of marking.

TABLES

A detailed report of the results obtained in the inspection and analysis of fertilizers from January 1, 1931, to May 1, 1931, are contained in pages 8 to 31 inclusive.

FEED CONTROL ACTIVITIES

In the performance of our feed inspection duties, the most prevalent violation encountered is the failure of manufacturers to register their products before placing them upon the market. During the period from January 1 to June 1, 250, or 25 per cent. of the total number of samples secured, were reported as unlicensed at the time of sampling. Improper tagging or failing to place the required information on the package stands second in the list of violations. These violations indicate either gross carelessness on the part of the manufacturer or the fact that they are trying to evade payment of the registration fee. This department is not empowered to overlook such violations indefinitely. Hereafter, dealers found handling unlicensed feeds will be so notified and requested to remove same from the market pending satisfaction of registration requirements. A repetition of this offense will force the Control Service to initiate prosecution.

In preparing cases for court action, it is absolutely essential that shipping memoranda be obtained. Dealers are requested to keep available for a reasonable period of time the original invoice and, when possible, freight bill.

This department receives each year many samples of feed suspected by farmers or poultry raisers of causing either physical derangement or actual mortality in their flocks. A very close working agreement has been established with the State Poultry Department, to the extent that all such samples are referred to this organization for actual feeding tests. The results of these tests, covering the past three years, have been published in bulletin form by George D. Quigley and Roy H. Waite of the Experiment Station staff. Quoting from this publication: "Of the 61 samples of mixed feeds submitted, some of which were accused of killing birds by the score, not a single one was found to kill healthy birds in our tests even though the possible deleterious effects were greatly magnified by giving the feed as the entire ration after a starvation period. Two unsatisfactory samples were reported. When fed, both produced severe intestinal disturbances which disappeared when the samples were discontinued. It would seem that our results indicate both the general high quality of proprietary and mixed feeds in Maryland, and the fact that sudden mortality in poultry flocks is likely to be due to some factor other than the feed or to a complication of factors, including disease and parasites. Because of insufficient information concerning the true nature of poultry troubles, poultry raisers are prone to somewhat unjustly blame the feed."

A résumé of all feed inspection work for the first four months of this year indicates fewer deficiencies in the chemical guarantees listed than in a corresponding period of previous years. It is deemed appropriate to publicly commend feed manufacturers for the splendid spirit they have shown in maintaining guarantees and refusing to substitute inferior articles in the products they are placing upon the Maryland market.

TABLES

The results obtained in the inspection and analysis of feeding stuffs from January 1, 1931, to May 1, 1931, are found on pages 34 to 81 inclusive. Feeds are considered seriously deficient as regards chemical analysis when they are 1 per cent. or more deficient in protein, or one-half of 1 per cent. deficient in fat.

A—Protein, fat and fibre guarantee and ingredients on sack differ from license; also detected buckwheat middlings.
 B—Protein, fat and fibre guarantee and ingredients on sack differ from license; also detected linseed oil meal; unable to detect wheat bran.
 C—Protein, fat and fibre guarantee on sack differ from license. D—Also detected screenings.
 E—Unable to detect millet; also detected oats and .6% weed seeds consisting chiefly of thistle and yellow foxtail; also .25% straw stems. F—Fat and fibre guarantee on sack differ from license.
 G—Also detected buckwheat. H—Fibre guarantee on sack differs from license.
 I—Unable to detect sunflower seed; also detected 3.70% cockle; wheat badly weevil cut.
 J—Fat guarantee and ingredients on sack differ from license. L—Also detected ground oats.
 K—Ingredients on sack differ from license.
 x Fat as determined by the Roesse-Gottlieb Method.

LIME INSPECTION ACTIVITIES

The lime inspection law of Maryland requires that all liming materials offered for sale shall be registered with this organization. It also provides that the net weight, brand name, guaranteed analysis and name and address of the manufacturer shall appear on each package. When shipped in bulk, a card containing this information shall accompany the shipment.

The duties of this department, as outlined in the statute, consists in the registration of brands to be offered for sale, the inspection of methods of labeling, the collection and analysis of official samples, the publication of the results obtained and prosecution of those parties found responsible for violation of the law.

In accordance with these provisions, representatives of this department secured 102 official samples consisting of 26 burnt limes (oxides), 52 hydrated limes, 16 limestone, shell and marl, six gypsum or land plaster and one miscellaneous.

To establish the correctness of the guarantees, these samples were subjected to chemical examinations for the purpose of determining the amount of calcium oxide, magnesium oxide and acid insoluble material present. Examinations were also made upon ground limestones and ground oyster shells to determine the degree of fineness of grinding.

In addition to the chemical examination of official samples, 22 other determinations were made gratuitously on samples forwarded by residents of the State. These results are not included in our official reports. In this connection it should be borne in mind that this department cannot perform work in such volume or with such frequency as to exercise a systematic control over purchases.

It is indeed gratifying to note that only seven per cent. of the products analyzed were found to be more than 1 per cent. deficient in total oxides. As soon as these deficiencies were brought to manufacturer's attention corrective measures were immediately initiated.

TABLES

Pages 84 to 88 contain a detailed report of the results obtained in the regulation of the sale of limes in this State from January 1, 1931, to May 1, 1931. Limes are considered deficient with respect to chemical analysis when they are 1 per cent. or more deficient in total oxides.
